$3^3 = 3 \times 3 \times 3 = 27$; $6^3 = 6 \times 6 \times 6 = 216$

$7^3 = 7 \times 7 \times 7 = 343.$

(ii) Cubes of all odd numbers are odd.

(3) Given pattern.

$$1^3 = 1$$

$$1^3 + 2^3 = (1+2)^2$$

$$1^3 + 2^3 + 3^3 = (1+2+3)^2$$

Now, similarly

$$1^3 + 2^3 + 3^3 + \ldots n^3 = (1+2+3 \ldots n)^2$$

$$\Rightarrow \left(1^3 + 2^3 + 3^3 \ldots + 9^3 + 10^3\right) = (1+2+3+4 \ldots + 9 + 10)^2$$

$$= (55)^2 = 55 \times 55$$

$$= 3025$$

(4) First 5 natural numbers which are multiples of 3 are 3, 6, 9, 12, 15.

Cube of $3 = 3^3 = 3 \times 3 \times 3 = 27$

$9^3 = 9 \times 9 \times 9 = 729$

$12^3 = 12 \times 12 \times 12 = 1728$

$15^3 = 15 \times 15 \times 15 = 3375$

all the cubes got are divisible by 27.

There, fore

'the cube of a natural number which is a multiple of 3 is a multiple of 27'.

(5) First 5 natural numbers in the form of $(3n+1)$ are :-

$10^3 = 10 \times 10 \times 10 = 1000$

$13^3 = 13 \times 13 \times 13 = 2197$

$16^3 = 16 \times 16 \times 16 = 4096$

64, 343, 1000, 2197, 4096 gives remainder '1'

when divided by '7'.

$\Rightarrow$ Give statement is true

(5) +1

(6) First five natural numbers in $3n+2$ form are

5, 8, 11, 14, 17

Cubes of given numbers are :

$8^3 = 8 \times 8 \times 8 = 512$

$11^3 = 11 \times 11 \times 11 = 1331$

$14^3 = 14 \times 14 \times 14 = 2744$

$17^3 = 17 \times 17 \times 17 = 4913$

125, 512, 1331, 2744, 4913 gives remainder '2'.

when divided by '3'.

$\Rightarrow$ Given statement is true.

(7) First 5 natural numbers which are multiples of 7 are :- 7, 14, 21, 28, 35.

Cubes of these numbers

$$7^3 = 7 \times 7 \times 7 = 343$$

$$14^3 = 14 \times 14 \times 14 = 2744$$

$$21^3 = 21 \times 21 \times 21 = 9261$$

$$28^3 = 28 \times 28 \times 28 = 21952$$

$$35^3 = 35 \times 35 \times 35 = 42875$$

343, 2744, 9261, 21952, 42875 are the multiples of 7^3.
