

# Mensuration-I Area of a Trapezium and a Polygon EX-20.1

MENSURATION - I

Exercise - 20.1

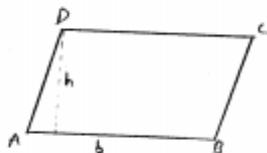

①

1. Given: Base ( $b$ ) = 84 cm  
 $= 0.84 \text{ m}$  [ $\because 1 \text{ m} = 100 \text{ cm}$ ]

height ( $h$ ) = 10 cm  
 $= 0.10 \text{ m}$

As we know

Area of parallelogram  
 $(A) = b \times h \text{ } \text{m}^2$   
 $= 0.84 \times 0.10$   
 $= 0.084 \text{ m}^2$

Each flooring tile area =  $0.084 \text{ m}^2$

let 'n' be no. of such tiles

$\therefore$  given  $n \times A = 1080 \text{ m}^2$

$\Rightarrow n \times 0.084 = 1080$

$\Rightarrow n = \frac{1080}{0.084} = 12500$

$\therefore$  The no. of such tiles which cover  $1080 \text{ m}^2$

are 125,000.

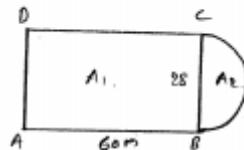

2. Given = Plot:

The area of given plot can be given as

$$A = A_1 + A_2$$

$A_1$  = Area of Rectangle

$A_2$  = Area of Semicircle.

2. — continued

$$A_1 = \text{length} \times \text{breadth} \quad \left\{ \begin{array}{l} \text{area of} \\ \text{rectangle} = l \times b \end{array} \right\}.$$

$$= 60 \times 28$$

$$= 1680 \text{ m}^2$$

$$A_2 = \frac{\pi r^2}{2} \quad \left\{ \begin{array}{l} \text{area of circle} \\ = \pi r^2 \\ \text{Semicircle} = \frac{\pi r^2}{2} \end{array} \right\}.$$

$$\text{radius } (r) = \frac{BC}{2} = \frac{28}{2}$$

$$r = 14 \text{ m}$$

$$\Rightarrow A_2 = \frac{\pi \times (14)^2}{2}$$

$$= 307.876 \text{ m}^2$$

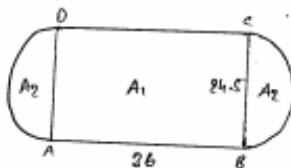

$$\text{Therefore, Area of plot} = A_1 + A_2$$

$$= 1680 + 307.876$$

$$A = 1987.876 \text{ m}^2$$

$$A = 1988 \text{ m}^2 \text{ (rounded off).}$$

3.

Given:  
A Play ground of the above shape  
with given dimensions.

$$\rightarrow \text{radius of semi circle} = \frac{BC}{2} = \frac{24.5}{2} = 12.25 \text{ m.}$$

$$\text{Area of Play ground } A = A_1 + 2A_2$$

(3)

3 - continued.

$$\begin{aligned} A_1 &= l \times b \\ &= 36 \times 24.5 \\ &= 882 \text{ m}^2 \end{aligned}$$

$$2 \cdot A_2 = 8 \times \frac{\pi r^2}{4} = \pi \times (12.25)^2$$

$$= 471.435 \text{ m}^2$$

$$\begin{aligned} \text{Area of playground } A &= A_1 + A_2 \\ &= 882 + 471.43 \\ &= 1353.435 \text{ m}^2 \end{aligned}$$

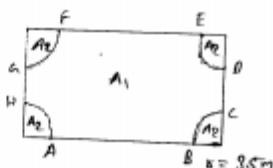

$\therefore$  Area of playground is  $1353.435 \text{ m}^2$ .

4. Given:

Rectangle Piece

length = 20m

breadth = 15m

Let  $A_1$  = Area of rectangle $A_2$  = Area of quadrant part

The area of remaining part after removing corners

is  $A = A_1 - 4A_2$

$A_1 = 20 \times 15 = 300 \text{ m}^2$

$$A_2 = \frac{\pi r^2}{4} = \pi (3.5)^2$$

$$= 38.48 \text{ m}^2$$

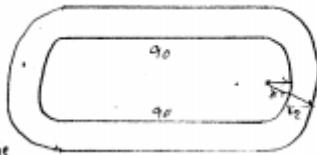

$\left[ \because \text{four corners form a circle} \right]$

$A = A_1 - A_2 = 300 - 38.48$

$$A = \underline{\underline{261.52 \text{ m}^2}}$$

5.

Let  $r_1$  be the inner radius and  
 $r_2$  be the outer radius

We know the side length is 90m

$$\therefore \text{Perimeter} = 2l + 2\pi r = 400$$

$$180 + 2\pi r_1 = 400 \quad [l = 90\text{m}]$$

$$r_1 = 35.01\text{m}$$

$$\therefore r_2 = r_1 + \text{width}$$

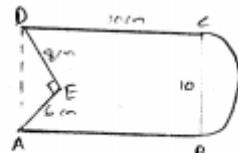

$$= 35.01 + 14 = 49.01\text{m} \quad [\because \text{given width} = 14\text{m}]$$

$$\begin{aligned} \therefore \text{Area} &= 2 \times l \times w + \pi [r_2^2 - r_1^2] \\ &= 2 \times 90 \times 14 + \pi [49.01^2 - 35.01^2] \\ &= \underline{\underline{6214 \text{ m}^2}} \end{aligned}$$

$$\begin{aligned} \text{length of outer track} &= 180 + 2\pi r_2 \\ &= 180 + 2\pi \times 49.01 = \underline{\underline{488 \text{ m}}} \end{aligned}$$

6. Area of given figure can be written as

$$\begin{aligned} A &= \text{Area of } ABCD - \\ &\quad \text{Area of } DEA + \text{Area of Arc BC} \end{aligned}$$

$$\begin{aligned} &= 10 \times 10 - \left(\frac{1}{2} \times 8 \times 6\right) + \frac{\pi}{2} \times \left(\frac{5}{4}\right)^2 \\ &= 100 - 24 + 39.26 = 115.26 \text{ cm}^2 \end{aligned}$$

7. Given

$$\text{diameter of wheel} = 90\text{cm}$$

$$\text{No. of revolutions} = 315/\text{min}$$

We know that

$$V = \pi w$$

$$V = \frac{0.45 \times 2 \times \pi \times 315 \times 60}{1000} \text{ km/hr}$$

$$V = 53.46 \text{ km/hr.}$$

8. Given, Area of rhombus =  $240 \text{ cm}^2$

$$\text{diagonal } d_1 = 16 \text{ cm}$$

$$\text{diagonal } d_2 = ?$$

$$\therefore A = \frac{1}{2} d_1 d_2$$

$$240 = \frac{16 \times d_2}{2} \Rightarrow d_2 = \underline{\underline{30 \text{ cm}}}$$

9. Given, diagonal  $d_1 = 7.5 \text{ cm}$

$$\text{diagonal } d_2 = 12 \text{ cm}$$

$$\text{Area} = \frac{1}{2} \times d_1 \times d_2$$

$$= \frac{1}{2} \times 7.5 \times 12$$

$$= 45 \text{ cm}^2$$

10. Given

lengths of opposite sides

$$a = 8 \text{ m}$$

$$b = 13 \text{ m}$$

$$\text{height} = 24 \text{ m}$$

$$\begin{aligned}\therefore \text{Area of quadrilateral } A &= \frac{1}{2} \times h(a+b) \\ &= \frac{1}{2} \times 24(13+8) \\ &= \underline{\underline{252 \text{ m}^2}}\end{aligned}$$

11. Given,

$$\text{Side length of Rhombus} = 6 \text{ cm}$$

$$\text{Altitude} = 4 \text{ cm}$$

$$\therefore \text{other parallel side length} = 6 \text{ cm } \{ \because \text{rhombus} \}.$$

$$\begin{aligned}\therefore \text{Area} &= \frac{1}{2} \times h \times [6+6] \quad \{ \because \text{Area of quadrilateral} \\ &\qquad\qquad\qquad = \frac{1}{2} \times h(a+b) \}. \\ &= \underline{\underline{24 \text{ cm}^2}}\end{aligned}$$

$$24 = \frac{1}{2} \times d_1 \times d_2$$

$$\frac{24 \times 2}{8} = d_2 \quad \{ \because \text{diagonal } d_1 = 8 \text{ cm} \}.$$

$$\therefore d_2 = \underline{\underline{6 \text{ cm}}}$$

12. Given,

lengths of diagonals

$$d_1 = 48 \text{ cm}$$

$$d_2 = 30 \text{ cm}$$

$$\text{Area} = \frac{1}{2} \times d_1 \times d_2 = \frac{48 \times 30}{2}$$

$$= 675 \text{ cm}^2$$

$$\begin{aligned}\text{Area of 3000 tiles} &= 675 \times 3000 \\ &= 2025000 \text{ cm}^2 \\ &= 202.5 \text{ m}^2 \quad \{ \because 1 \text{ m}^2 = 10^4 \text{ cm}^2 \}.\end{aligned}$$

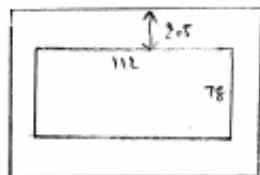

Cost per  $\text{m}^2$  is 4/-

$$\therefore \text{Cost for } 202.5 \text{ m}^2 \text{ is } \Rightarrow 202.5 \times 4$$

$$= \underline{\underline{810 \text{ /-}}}$$

13. Given, inner length  $l_1 = 112 \text{ m}$ inner breadth  $b_1 = 78 \text{ m}$ 

$$\begin{aligned}\text{outer length} &= l_1 + 2w \\ &= 112 + 5 = 117 \text{ m}\end{aligned}$$

$$\text{outer breadth} = b_1 + 2w = 83 \text{ m}$$

$$\begin{aligned}\text{Area of gravel path} &= l_2 b_2 - l_1 b_1 \\ &= 117 \times 83 - 78 \times 112 \\ &= 975 \text{ m}^2\end{aligned}$$

$$\text{Cost} = 975 \times 4.5 = 4387.5 \text{ /-}$$

14. Area of rhombus whose sides are 20cm each

diagonal length = 24 cm

From  $\triangle ABE$

$$AB^2 = AE^2 + EB^2$$

$$400 - 144 = EB^2$$

$$EB = 16 \text{ cm}$$

$$\therefore \text{Area of } \triangle AEB = \frac{1}{2} \times 16 \times 12$$
$$= 96 \text{ cm}^2$$

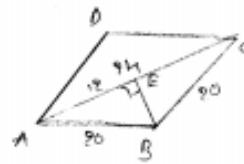

$$\therefore \text{Area of rhombus} = 4 \times \text{Area of } \triangle AEB$$
$$= 4 \times 96$$
$$= \underline{\underline{384 \text{ cm}^2}}$$

15. Area of square =  $4^2 = 16 \text{ m}^2$

diagonal  $d_1 = 2\text{m}$

Area of rhombus =  $\frac{1}{2} \times d_1 \times d_2$

$$\therefore d_2 = \underline{\underline{16 \text{ m}}}$$

16. Given,

$$\text{Side of Rhombus} = 14 \text{ cm}$$

$$\text{Altitude } h = 16 \text{ cm}$$

$$\begin{aligned}\text{Area of Quadrilateral (or Rhombus)} &= \frac{1}{2} \times h (a+b) \\ &= \frac{1}{2} \times 16 \times (14+14) \\ &= \underline{\underline{224 \text{ cm}^2}}\end{aligned}$$

17. Given,

Cost of fencing per meter is Rs 0.6/-

Total cost of fencing = Perimeter  $\times$  Cost

$$1200 = 40 \times 0.6 \quad [\because \text{Given}]$$

$$\therefore a = 500 \text{ m}$$

$$\text{Area} = 500 \times 500 = 250000 \text{ m}^2$$

$$\text{Cost for } 100 \text{ m}^2 = \text{Rs } 0.51/-$$

$$\begin{aligned}\therefore \text{Total Cost} &= 2500 \times 0.51 \\ &= \underline{\underline{\text{Rs } 1250}}\end{aligned}$$

18. Given Area of square plot = Area of rectangular plot

$$\Rightarrow 84 \times 84 = 144 \times b$$

$$\Rightarrow b = 49 \text{ m}$$

$$\therefore \text{width} = \underline{\underline{49 \text{ m}}}$$

19. Given,

$$\text{Area of Rhombus} = 84 \text{ m}^2$$

$$\text{Perimeter} = 40 \text{ m}$$

$$\therefore 4a = 40$$

$$a = \underline{\underline{10 \text{ m}}}$$

$$\Rightarrow \frac{1}{2} \times h (2 \times 10) = 84 \quad \left[ \because \frac{1}{2} \times h [a+a] = \text{Area} \right]$$

$$h = \underline{\underline{8.4 \text{ m}}}$$

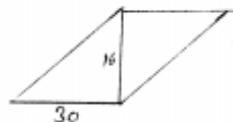

20. Given,

$$\text{Base} = 30 \text{ m}$$

$$\text{Altitude} = 16 \text{ m}$$

$$\text{Area} = 2 \left[ \frac{1}{2} \times 30 \times 16 \right]$$

$$= 480 \text{ m}^2 \quad \left[ \because \text{two times Area of } \Delta^c \right]$$

Cost of leveling is RS 2/- per  $\text{m}^2$

$$\therefore \text{Total Cost} = 480 \times 2 = \underline{\underline{\text{RS } 960/-}}$$

21. Given,

Rhombus dimensions as

$$\text{Side length} = 64 \text{ m}$$

$$\text{Altitude} = 16 \text{ m}$$

$$\text{Area} = \frac{1}{2} \times 16 \times [64+64]$$

$$= 1024 \text{ m}^2$$

Given Area is equal to Area of a Square

$$\therefore 1024 = a^2$$

$$\Rightarrow a = \underline{\underline{32 \text{ m}}}$$

22.

Given

$$\text{Area of } \Delta^c = \text{Area of Rhombus}$$

$$\frac{1}{2} \times b \times h = \frac{1}{2} \times d_1 \times d_2$$

$$24.8 \times 16.5 = 22 \times d_2$$

$$d_2 = \underline{\underline{18.6 \text{ cm}}}$$

## Mensuration-I Area of a Trapezium and a Polygon Ex 20.2

### EXERCISE - 20.2

i) Given dimensions are

$$\text{bases} = 12 \text{ dm} = 1.2 \text{ m}$$

$$80 \text{ dm} = 8.0 \text{ m}$$

$$\text{Altitude} = 10 \text{ dm} = 1.0 \text{ m} \quad [1 \text{ dm} = 10 \text{ m}]$$

$$\text{Area} = \frac{1}{2} \times \text{Altitude} \times (\text{sum of bases})$$

$$= \frac{1}{2} \times 1.0 \times [8.0 + 1.2] = \underline{\underline{1.6 \text{ m}^2}}$$

ii) bases = 28 cm = 0.28 m

$$3 \text{ dm} = 0.3 \text{ m}$$

$$\text{Altitude} = 25 \text{ cm} = 0.25 \text{ m}$$

$$\text{Area} = \frac{1}{2} \times 0.25 \times [0.3 + 0.28]$$

$$= \underline{\underline{0.0785 \text{ m}^2}}$$

iii) bases = 8 m

$$6 \text{ dm} = 6 \text{ m}$$

$$\text{Altitude} = 4 \text{ dm} = 4 \text{ m}$$

$$\text{Area} = \frac{1}{2} \times 4 \times [8+6]$$

$$= \underline{\underline{28 \text{ m}^2}}$$

iv) bases = 180 cm = 1.8 m

$$8 \text{ dm} = 8 \text{ m}$$

$$\text{Altitude} = 9 \text{ dm} = 0.9 \text{ m}$$

$$\text{Area} = \frac{1}{2} \times 0.9 [1.8 + 8] = \underline{\underline{8.085 \text{ m}^2}}$$

2. Given,

$$\text{base} = 15\text{cm} = 0.15\text{m} \quad \left[ \because 1\text{cm} = 0.01\text{m} \right]$$
$$\text{height} = 8\text{cm} = 0.08\text{m}$$

$$\text{parallel side} = 9\text{cm} = 0.09\text{m}$$

$$\begin{aligned}\text{Area} &= \frac{1}{2} \times h \times [a+b] = \frac{0.08}{2} [0.15 + 0.09] \\ &= 9.6 \times 10^{-3} \text{m}^2 \\ &= 96 \text{ cm}^2\end{aligned}$$

3. Given,

$$\text{sides are } 16\text{dm} = 1.6\text{m}$$

$$22\text{dm} = 2.2\text{m}$$

$$\text{height is } 12\text{dm} = 1.2\text{m}$$

$$\begin{aligned}\text{Area} &= \frac{1}{2} \times 1.2 [1.6 + 2.2] \\ &= 2.28 \text{ m}^2\end{aligned}$$

4. Given, Area =  $600\text{cm}^2$

$$\text{Sum of parallel sides} = 60\text{cm}$$

$$\therefore \text{Area} = \frac{1}{2} \times \text{Altitude} \times \text{Sum of parallel sides}$$

$$600 = \frac{1}{2} \times h \times 60$$

$$h = 20\text{cm}$$

5. Given,

$$\text{Area} = 65 \text{ cm}^2$$

bases are 13 cm, 26 cm

$$\text{Sum of bases} = 13 + 26 = 39 \text{ cm}$$

$$\therefore \text{Area} = \frac{1}{2} \times h \times \text{Sum}$$

$$65 = \frac{1}{2} \times h \times 39$$

$$h = \frac{10}{3} \text{ cm}$$

6. Given. Area of trapezium = 4.8 m<sup>2</sup>

$$\text{height} = 2.8 \text{ m} = 2.8 \text{ m}$$

$$\therefore 4.8 = \frac{1}{2} \times 2.8 \times \text{Sum}$$

$$\therefore \text{Sum of bases} = 3 \text{ m}$$

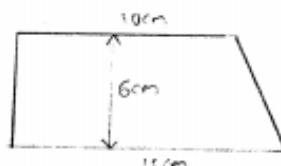

7.

Given,

Sides of trapezium

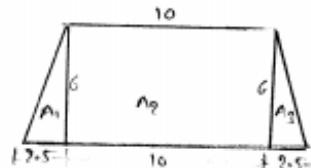

as 10 cm and

15 cm

height (or) distance b/w them be 6cm

- 7 (i) The figure shows that  
 $A_1$ ,  $A_3$  are the areas  
of two triangles and  
 $A_2$  be the area of  
rectangle.

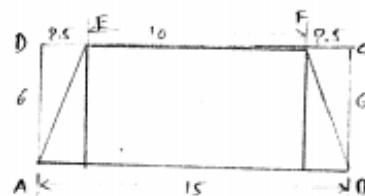

$$\therefore A_1 = \frac{1}{2} \times 2.5 \times 6 = 7.5 \text{ cm}^2 = A_3$$

$$A_2 = 10 \times 6 = 60 \text{ cm}^2$$

$$\begin{aligned}\text{Total (or) Trapezium Area} &= A_1 + A_2 + A_3 = 60 + 7.5 + 7.5 \\ &= 75 \text{ cm}^2.\end{aligned}$$

- (ii) The given question can  
be written as

Area of trapezium

$$= \text{Area of rectangle } ABCD - [\text{Area of } \triangle DEA + \text{Area of } \triangle FCB].$$

$$\therefore \text{Area of rectangle } ABCD = 15 \times 6 = 90 \text{ cm}^2$$

$$\text{Area of } \triangle DEF (\text{or) } FCB = \frac{1}{2} \times 2.5 \times 6 = 7.5 \text{ cm}^2$$

$$\begin{aligned}\therefore \text{Area of trapezium} &= 90 - [7.5 + 7.5] \\ &= \underline{\underline{75 \text{ cm}^2}}\end{aligned}$$

8. Given,

$$\text{Area of trapezium} = 960 \text{ cm}^2$$

The parallel sides are 34 cm & 46 cm

$$\therefore \text{Area} = \frac{1}{2} \times h \times [34 + 46]$$

$$\frac{960 \times 2}{[34 + 46]} = h = 24 \text{ cm}$$

9. The Area of the figure can be given as

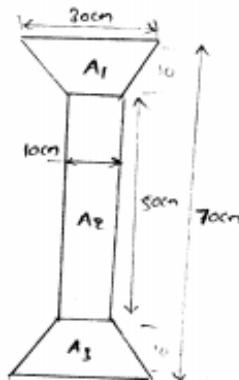

$$A_1 + A_2 + A_3 = A$$

where

$A_1$  = Area of trapezium

$A_2$  = Area of rectangle

$A_3$  = Area of trapezium

$$A_1 = \frac{1}{2} \times 10 \times [30 + 10] = 200 \text{ cm}^2$$

$$A_2 = 50 \times 10 = 500 \text{ cm}^2$$

$$A_3 = \frac{1}{2} \times 10 \times [50 + 10] = 300 \text{ cm}^2$$

$$A = 200 + 500 + 300 = \underline{\underline{900 \text{ cm}^2}}$$

10. Given

top surface of table is trapezium

parallel sides are 1m & 1.2m

distance b/w them is 0.8

$$\therefore A = \frac{1}{2} \times 0.8 \times [1+1.2]$$

$$= 0.4 \times 1.2$$

$$= 0.88 \text{ m}^2$$

=

11. Given

Top width = 10m

bottom width = 6m

Area = 72 m<sup>2</sup>

$$\therefore \text{Area} = \frac{1}{2} \times h \times [10+6]$$

$$\frac{72 \times 2}{16} = h. = \underline{\underline{9 \text{ m}}}$$

12. Given

Area of trapezium = 8.91 cm<sup>2</sup>

height = 7cm

let 'l' be one of length of side

given other is longer by 8cm

$\therefore$  other side is  $(l+8)$

$$12. \text{ Area} = \frac{1}{2} \times h \times [a+b]$$

$$91 = \frac{1}{2} \times 7 \times [l+17]$$

$$\frac{91 \times 2}{7} = 2l + 8$$

$$l = 9 \text{ cm}$$

$\therefore$  one side is 9 cm  
other side is 17 cm.  
 $=$

$$13. \text{ Given, Area} = 384 \text{ cm}^2$$

$$\text{Height} = 12 \text{ cm}$$

$$\text{ratio} = 3:5$$

$$\therefore 384 = \frac{1}{2} \times 12 \times 8a$$

$$a = 8.$$

$$\therefore \text{Sides are } 8 \times 3, 8 \times 5 = 24 \text{ cm, } 40 \text{ cm.}$$

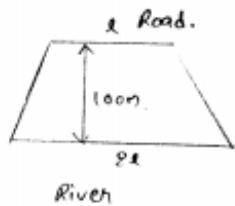

$$14. \text{ Given, Area} = 10500 \text{ m}^2$$

$$\text{height} = 100 \text{ m}$$

$$\therefore 10500 = \frac{1}{2} \times 100 \times [l+2l]$$

$$l = 70 \text{ m.}$$

$\therefore$  The length of side on river side is 140m

15. Area of trapezium =  $1886 \text{ cm}^2$

distance	$\pm 26 \text{ cm}$	let 'x' be other side.
one side	$= 38 \text{ cm}$	

$$1886 = \frac{1}{2} \times 26 \times [38 + x]$$

$$\underline{\underline{x = 84 \text{ cm}}}$$

16. Given parallel sides lengths are  $25\text{cm}$  &  $13\text{cm}$   
other two are  $10\text{cm}$  each.

from  $\triangle AFB$

$$AF^2 = AB^2 + FB^2$$

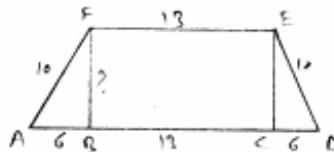

$$100 - 36 = FB^2$$

$$\therefore FB = 8\text{cm}$$

$$\therefore \text{Area} = \frac{1}{2} \times 8 \times [13 + 25]$$

$$= 152 \text{ cm}^2$$

$$\underline{\underline{}}$$

17. Same as the above problem figure

$$\triangle AFB \quad AF = 15\text{cm}$$

$$\therefore 15^2 - 96 = FB^2 \Rightarrow FB = 3\sqrt{21}\text{ cm}$$

$$\text{Area} = \frac{1}{2} \times 3\sqrt{21} \times [25 + 13] = 87\sqrt{21} \text{ cm}^2$$

$$\underline{\underline{}}$$

18. Area =  $28 \text{ cm}^2$

Side 1 = 6 cm

height = 4 cm  $A = \frac{1}{2} \times h(a+b)$

$$\therefore 28 = \frac{1}{2} \times 4 \times [6+x]$$

$$\frac{28}{2} = 6+x$$

$$x = \underline{\underline{8 \text{ cm}}}$$

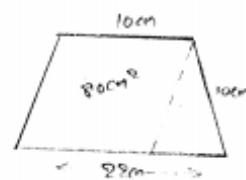

19. Area of parallelogram is  $80 \text{ cm}^2$

We know

$$b \times h = 80$$

$$10 \times h = 80$$

$$h = \underline{\underline{8 \text{ cm}}}$$

$$\text{Area of trapezium} = \frac{1}{2} \times 8 \times [10+8]$$

$$= \frac{1}{2} \times 8 \times 18$$

$$= \underline{\underline{72 \text{ cm}^2}}$$

20. The given figure can be

split into a square, Rectangle

and a Trapezium.

$$A_1 = \text{Square area}$$

$$= 4 \times 4 = 16 \text{ cm}^2$$

$$A_2 = \text{Rectangle area}$$

$$= 4 \times 8 = 32 \text{ cm}^2$$

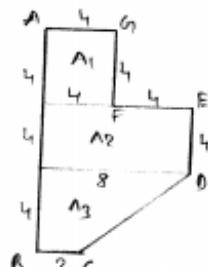

$$A_3 = \text{Trapezium Area}$$

$$= \frac{1}{2} \times 4 \times [8+3] = 22 \text{ cm}^2$$

$$\text{Total Area (A)} = A_1 + A_2 + A_3$$

$$= 16 + 32 + 22$$

$$= \underline{\underline{70 \text{ cm}^2}}$$

## Mensuration-I Area of a Trapezium and a Polygon Ex 20.3

EXERCISE - 20.3

1. Given       $AD = 10 \text{ cm}$        $CG = 7 \text{ cm}$   
 $AG = 8 \text{ cm}$        $EH = 3 \text{ cm}$ ,  
 $AH = 6 \text{ cm}$   
 $AF = 8 \text{ cm}$   
 $BF = 5 \text{ cm}$

Area of Pentagon =

$$\begin{aligned} & \text{Area of } \triangle AED + \\ & \text{Area of } \triangle ABF + \text{Area of } \triangle GDC + \\ & \text{Area of trapezium } BEGF. \end{aligned}$$

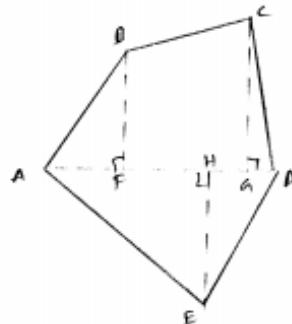

$$\begin{aligned} \text{Area of } \triangle AED &= \frac{1}{2} \times AD \times EH \\ &= \frac{1}{2} \times 10 \times 3 = 15 \text{ cm}^2 \end{aligned}$$

$$\text{Area of } \triangle ABF = \frac{1}{2} \times AF \times BF = \frac{1}{2} \times 8 \times 5 = 20 \text{ cm}^2$$

$$\begin{aligned} \text{Area of } \triangle GDC &= \frac{1}{2} \times GD \times GC = \frac{1}{2} \times 2 \times 7 = 7 \text{ cm}^2 \\ [\because AD - AG &= GD]. \end{aligned}$$

$$\begin{aligned} \text{Area of } BEGF &= \frac{1}{2} \times BG \times [5+7] = 18 \text{ cm}^2 \\ [\because FG &= 3]. \end{aligned}$$

$$\begin{aligned} \therefore \text{Total Area} &= 15 + 20 + 7 + 18 \\ &= \underline{\underline{52.5 \text{ cm}^2}} \end{aligned}$$

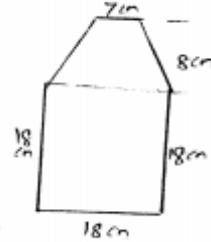

2.

(i)

Area = rectangle area +  
trapezium area

$$= 18 \times 18 + \frac{1}{2} \times 8 \times [7+18]$$

$$= 424 \text{ cm}^2$$

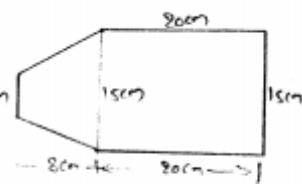

(ii)

Area = rectangle area +

trapezium area

$$= 20 \times 15 + \frac{1}{2} \times 8 \times [6+15]$$

$$= 384 \text{ cm}^2$$

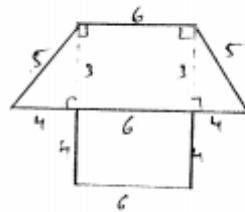

(iii)

Area = rectangle area +

trapezium area

$$= 4 \times 6 + \frac{1}{2} \times 3 \times [14+6]$$

$$= 54 \text{ cm}^2$$

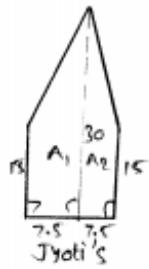

3.

(i) Jyoti's diagram Area?

$$A_1 = \frac{1}{2} \times 7.5 \times [15+30]$$

$$= 168.75$$

$$A_2 = \frac{1}{2} \times 7.5 \times [15+30]$$

$$= 168.75$$

$$\text{Total Area} = 2 \times 168.75 = \underline{\underline{337.5}} \text{ m}^2$$

(ii) Kavita's diagram Area?

$$A_1 = \text{Area of triangle}$$

$$= \frac{1}{2} \times 15 \times 15$$

$$= 112.5 \text{ m}^2$$

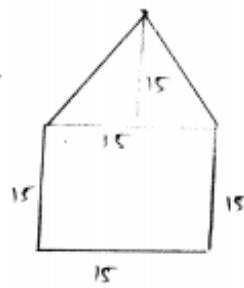

$$A_2 = \text{Area of rectangle}$$

$$= 15 \times 15$$

$$= 225$$

$$\text{Total} = A_1 + A_2 = 112.5 + 225$$

$$= \underline{\underline{337.5}} \text{ m}^2$$

Kavita's.

∴ Both the areas are equal

4. Given :

$$AL = 10\text{cm}, \quad AO = 60\text{cm}.$$

$$AM = 20\text{cm} \quad AD = 90\text{cm}$$

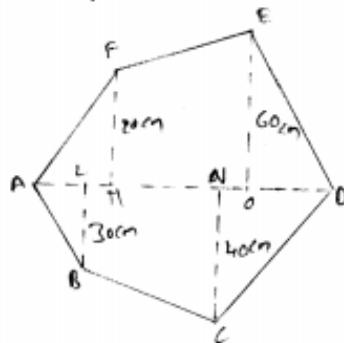

$$AN = 50\text{cm}$$

from figure?

$$FM = 20\text{cm} \quad NC = 40\text{cm}$$

$$OE = 60\text{cm}$$

$$LB = 30\text{cm}$$

$$\begin{aligned}\text{Area of polygon} &= \text{Area of } \triangle AFM + \\ &\quad \text{Area of } \triangle ODE + \text{Area of } \triangle ALB + \\ &\quad \text{Area of } \triangle DNC + \text{Area of trapezium} \\ &\quad F E O M + \\ &\quad \text{Area of trapezium } L O B C.\end{aligned}$$

$$\text{Area of } \triangle AFM = \frac{1}{2} \times AM \times FM = \frac{1}{2} \times 20 \times 20 = 200\text{cm}^2$$

$$\text{Area of } \triangle ODE = \frac{1}{2} \times 30 \times 60 = 900\text{cm}^2$$

$$\text{Area of } \triangle ALB = \frac{1}{2} \times AL \times LB = \frac{1}{2} \times 10 \times 30 = 150\text{cm}^2$$

$$\text{Area of } \triangle DNC = \frac{1}{2} \times DN \times NC = \frac{1}{2} \times 40 \times 40 = 800\text{cm}^2$$

$$\text{Area of } F E O M = \frac{1}{2} \times 30 \times [20+60] = 1200\text{cm}^2$$

$$\text{Area of } L O B C = \frac{1}{2} \times 40 \times [40+30] = 1400\text{cm}^2$$

$$\begin{aligned}\text{Total Area} &= 1400 + 1200 + 800 + 150 + 900 + 200 \\ &= \underline{\underline{5050\text{cm}^2}}\end{aligned}$$

5. Area of regular hexagon

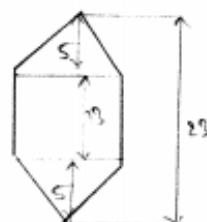

$$= \text{Area of } \triangle M N O + \text{Area of rectangle} \\ M O P R +$$

$$\text{Area of } \triangle R P Q$$

$$\Rightarrow \text{Area of } \triangle M N O = \frac{1}{2} \times 5 \times 13\sqrt{3}$$

$$\text{Area of } \triangle R P Q = \frac{1}{2} \times 5 \times 13\sqrt{3}$$

$$\text{Area of } M R P = 13 \times 13\sqrt{3}$$

$$\text{Area of regular hexagon} = 405.29 \text{m}^2$$
