1. The actual result of chemical change.
2. The substances take part in a chemical reaction and substances formed as a result of reaction.
3. Here one molecule of zinc, one molecule of Sulphuric acid react to give one molecule of zinc sulphate and one molecule of Hydrogen.
4. Composition of respective molecules i.e. one molecule of sulphuric acid contains two atoms of hydrogen, one atom of sulphur and four atoms of oxygen.

 ZnSO_4 (65+32+64) = **161**
 $\text{H}_2 = 2$

1. A chemical equation consists of formulae of reactants connected by plus sign (+) and arrow ($\rightarrow$) followed by the formulae of products connected by plus sign (+).
2. The sign of an arrow ($\rightarrow$) is to read 'to form'. It also shows the direction in which reaction is predominant.

Solution 7.

According to law of conservation of mass, "matter can neither be created nor be destroyed in a chemical reaction". This is possible only, if total number of atoms on the reactants side is equals to total number of atoms on products side. Thus, a chemical reaction should be always balanced.

Let us consider an example,

In this equation number of atoms on both sides is not the same, the equation is not balanced.

The balanced form of this equation is given by,
