CHAPTER 1

INTRODUCTION

Macroeconomics is a branch of economics that studies the economic variables of an economy as a whole.

Points of Difference	Microeconomics	Macroeconomics
1. Study matters	It studies about individual economic units like households, firms, consumers, etc.	It studies about an economy as a whole.
2. Deals with	It deals with how consumers or producers make their decisions depending on their given budget and other variables.	It deals with how different economic sectors such as households, industries, government and foreign sector make their decisions.
3. Method	It uses the method of partial equilibrium, i.e. equilibrium in one market.	It uses the method of general equilibrium, i.e. equilibrium in all markets of an economy as a whole.
4. Variables	The major microeconomic variables are price, individual consumer's demand, wages, rent, profit, revenues, etc.	The major macroeconomic variables are aggregate price, aggregate demand, aggregate supply, inflation, unemployment, etc.

Difference between Microeconomics and Macroeconomics

5. Theories	Various theories studied are:	Various theories studied are:
	1) Theory of Consumer's	1) Theory of National Income
	Behaviour and Demand	2) Theory of Money
	2) Theory of Producer's	3) Theory of General Price
	Behaviour and Supply	Level
	3) Theory of Price	4) Theory of Employment
	Determination under Different	5) Theory of International
	Market Conditions	Trade
6. Popularised by	Alfred Marshall	Keynes

Partial equilibrium

It refers to equilibrium in one market, assuming that there is no change in other markets for example, while analysing the equilibrium of an individual producer (optimising his/her cost of production), we assume that there exists no change in other markets like labour and capital markets. And consequently, wage rate and interest rate are held constant. It is the method of study in microeconomics.

General equilibrium

General equilibrium is the method to study equilibrium in different markets simultaneously. It is the method of study in macroeconomics.

Economic agents

Those individuals or institutions which take economic decisions and optimising their resources by solving their choice problems in a rational manner are called economic agents. For example, producers, consumers, government, banks etc.

Adam Smith who is known as the father of modern economics is associated with classical school of economic thoughts.

Emergence of Macroeconomics

The Great Depression was a severe economic crisis that started in the year 1929. It originated in the United States of America with the crash of the stock market and gradually

spread to other countries of the world. The main cause behind this crisis was the fall in aggregate demand due to under consumption and over investment.

The cause and effect relationship of the Great Depression can be summed up in this flow chart

Low demand \rightarrow overinvestment \rightarrow low level of employment \rightarrow low level of output \rightarrow low income \rightarrow low demand.

The Great depression led to the failure of classical approach and paved the way for emergence of Keynesian approach.

Classical School	Keynesian School	
 Classical economists advocated for free economy where resources are fully utilised and the economy automatically reaches to a state of full employment equilibrium. 	Keynesian economists believed there always exist certain level of unemployment which would not disappear automatically and hence calls for government regulations.	
2. These economists were strong	2. These economists strongly believed in	
proponents of market and did not believe in state intervention.	state intervention to generate employment opportunities	
3. The Classical school of thought	3. This Keynesian school of thought	
prevails in the long run.	dominates in the short run.	

Difference between Classical and Keynesian School

Capitalist economy (or laissez-faire)

- The role of the government is limited.
- The economy is driven by the motive of profit maximisation
- The central problems of an economy are solved by the market forces of demand and supply.
- There is a dominant role of private individuals in taking important economic decisions like, productions etc.

Four sectors of the economy
