# Foreword

---

Biotechnology is comparatively a newer discipline as compared to Biology, Chemistry or Microbiology. It has emerged as a new subject to be taught in schools and colleges in the last two–three decades. As the name indicates, Biotechnology fundamentally deals with the application of laws and principles that govern and control the processes and phenomenon in living organisms.

Considering the fact that Biotechnology has a potential to provide solutions to many of the diverse problems that our society is facing right from protection and conservation of environment to treatment of diseases; production of alcoholic beverages to many humulin pharmaceutical products (one such example is monoclonal antibodies used for the treatment and diagnosis of diabetes); development of drought and disease resistant crop varieties in agriculture to genetically modified crops; understanding genetic bases of many of the phenomena happening in organisms to deciphering the whole genome and such others. All these have created new vistas and wider opportunities with tremendous potential.

This emerging area has not only helped in providing solutions to many problems and answers to a number of queries related to fundamentals of the processes and phenomena of living organisms, but, it has also opened the gate of interdisciplinary collaborations in newer areas. Today's Biotechnology or even Biology for that matter cannot be completely understood without the understanding of Physics and Chemistry. Similarly, generations of enormous data and its interpretation has opened up opportunities in yet another area called Bioinformatics, which largely depends on computer based applications, softwares and algorithms. This has a potential of even providing tailor made diagnosis and treatment of diseases and prediction of a person's possible suffering of diseases in future.

However, considering the fact that the present course is an entry level one, this book mainly focuses on understanding the fundamental concepts. Focus has also been given on problem solving skills by providing opportunities for hands-on activities and experiments in laboratories on one hand, and working on bioinformatics databases on the other.

Last but not the least, as an organisation committed to systemic reforms and continuous improvement in the quality of its teaching-learning products, NCERT has always welcomed comments and suggestions which enables us to improve the quality of materials. Valuable comments and suggestions on the book will also help NCERT to improve the content of the textbook.

# Preface

---

Quite recently, in the last two-three decades specialised disciplines like Biotechnology, Computer Science, Information Practices, etc., have emerged as priority areas in school education and these have been introduced at the higher secondary stage. This stage is challenging because of the transition from general to discipline-based curriculum. The higher secondary stage is also a connecting link between school education and higher and technical education. Therefore, syllabus at this stage needs to have appropriate rigour and depth while remaining mindful of the comprehension level of the learners. Further, the textbook need not be heavily loaded with content.

Biotechnology, as the name suggests, is an applied discipline which has potential to impact various facets. On one hand it has provided solutions to many health and medicine related problems, while on the other it has provided opportunities to explore newer areas like genomics, transcriptomics, proteomics, etc. These areas have implications to improve the quality of life besides solving many problems on various fronts like treatment of diseases, environmental protection and conservation, and understanding the process of evolution of life on earth, etc.

As an applied area related to molecular biology and biotechnology, Bioinformatics has also become a popular discipline due to generation of enormous amount of data in the area of genome biology. Needless to mention that about 15 years back we have seen the publication of draft human genome as an outcome of globally collaborated project called, 'Human Genome Project'.

Students take up Biotechnology with an aim of pursuing a career in molecular biology, molecular medicine, genome biology and various production industries related to biotechnology and molecular biology. Therefore, the course content of the subject must address all areas in which the subject has an implication. At the same time, it is also to be considered that the course must also make a foundation for higher and technical education. An attempt has been made in this direction to ensure that there is a balance between appropriateness and prospective need.

The course for Class XI has been divided into five units with 12 chapters. Unit I provides an introduction to the subject — its background and application in various areas. Unit II, has four chapters with details to understanding of cells, its bio-molecules including enzyme and cellular processes. Three chapters of Unit III will be helpful in developing the understanding of fundamentals of genetics, genetic material, mechanisms and processes related to DNA and RNA, and certain abnormalities in human beings especially related to chromosomal and genetic mechanisms. Unit IV, has three chapters, on quantitative biology, bioinformatics and programming in biology with application. The last unit of the book acquaints learners in the understanding of various tools and techniques used in the area of Biotechnology. An attempt has been made that the book provides a lucid reading to students and teachers so that it can effectively transact the concepts mentioned.

I take this opportunity to place on record appreciation for U. N. Dwivedi, *Professor* Department of Biochemistry and Pro-Vice Chancellor of University of Lucknow, for leading the activities in the book as well as for his guidance and motivation to the development team. Thanks are due to the authors and reviewers for their valuable contribution.

Comments and suggestions towards the improvement of this book are welcome.

Dinesh Kumar

## CHAIRPERSON

U. N. Dwivedi, *Professor*, Department of Biochemistry, University of Lucknow, Lucknow

## MEMBERS

Amit Dinda, *Professor*, Department of Pathology, All India Institute of Medical Sciences, Delhi

Animesh Kumar Mohapatra, *Professor*, Regional Institute of Education, Bhubaneswar

Binay Panda, *Director*, Ganit Labs Foundation, Bio-IT Centre, Institute of Bioinformatics and Applied Biotechnology, Bengaluru

Indrakant K. Singh, *Assistant Professor*, Department of Zoology, Deshbandhu College, University of Delhi, Delhi

Kusum Yadav, *Assistant Professor*, Department of Biochemistry, University of Lucknow, Lucknow

Manoj K. Sharma, *Assistant Professor*, School of Biotechnology, Jawaharlal Nehru University, Delhi

Pawan K. Dhar, *Professor*, School of Biotechnology, Jawaharlal Nehru University, Delhi

Pushp Lata Verma, *Associate Professor*, Department of Education in Science and Mathematics, NCERT

Sunita Farkya, *Professor*, Department of Education in Science and Mathematics, NCERT

## MEMBER CO-ORDINATOR

Dinesh Kumar, *Professor and Head*, Department of Education in Science and Mathematics, NCERT

# Acknowledgements

---

National Council of Educational Research and Training (NCERT) gratefully acknowledges the contribution of the individuals and organisations involved in the development of the Biotechnology textbook for Class XI. The Council is grateful to G. B. N. Chainy, *Professor*, Department of Zoology and Biotechnology, Utkal University, Odisha; Rupesh Chaturvedi, *Professor*, School of Biotechnology, Jawaharlal Nehru University, Delhi; Poonam Sharma, *Assistant Professor*, Gargi College, University of Delhi, Delhi; C. V. Shimray, *Assistant Professor*, Department of Education in Science and Mathematics, NCERT and Veda Prakash Pandey, *DST-SERB Young Scientist*, Department of Plant Biotechnology, Central Institute of Medicinal and Aromatic Plants (CIMAP), Lucknow for their contribution in the review of the manuscripts.

The Council is also thankful to Indrakant K. Singh, *Assistant Professor*, Deshbandhu College, University of Delhi, Delhi for providing pictures of electrophoresis apparatus and vertical section of maize and wheat leaf from his Molecular Biology Research lab.

NCERT is highly thankful to Archana Thakur, *Deputy Director*, Central Board of Secondary Education, Delhi; Shakun Singh, *PGT*, Bhatnagar International School, Vasant Kunj, Delhi; Madhumati Bhaskara, *PGT*, G.D. Goenka Public School, Vasant Kunj, Delhi; Anjulika Joshi, *PGT*, Mount Carmel School, Anand Niketan, Delhi; Payal Priyadarshini, *PGT*, Kendriya Vidyalaya, Delhi Cantt-3, Delhi; Pratibha Sharma, *PGT*, Kendriya Vidyalaya, JNU, Delhi and Ambika Nagratan, *PGT*, Army Public School, Dhaula Kuan, Delhi for their valuable suggestions.

Valuable suggestions and comments given by Ravindra Kumar Parashar, *Professor*, Department of Education in Science and Mathematics, NCERT and Alka Mehrotra, *Professor*, Department of Education in Science and Mathematics, NCERT especially on thermodynamics and biomolecules chapters have helped in improving the content of the book.

The Council also acknowledges the academic contributions of Priyal Sharma, *Junior Project Fellow*, in finalising the manuscript. Contributions of Suman Prajapati, *Graphic Designer* and Preeti Dhiman, *DTP Operator* for typesetting are also acknowledged. Without their effort it would not have been possible to bring out the manuscript. Cooperation from Rajendra Singh, *Assistant Program Coordinator*, and his staff for their help in organising workshops and office logistics for the same is especially thanked.

The efforts of Soumma Chandra, *Assistant Editor* (Contractual), C. Thangminlal Doungel, *Editorial Assistant* (Contractual), Chanchal Chouhan, *Proof Reader* (Contractual), and Naresh Kumar, *DTP Operator* (Contractual), of the Publication Division, NCERT in bringing out the first edition of this book is also highly appreciated.

| 3.1 Carbohydrates                                                         | 50            |
| 3.2 Fatty Acids and Lipids                                                | 59            |
| 3.3 Amino Acids                                                           | 63            |
| 3.4 Protein Structure                                                     | 67            |
| 3.5 Nucleic Acids                                                         | 75            |

**Chapter 4: Enzymes and Bioenergetics** **85**

- 4.1 Enzymes: Classification and Mode of Action 85
- 4.2 Brief Introduction to Bioenergetics 96

**Chapter 5: Cellular Processes** **103**

- 5.1 Cell Signaling 103
- 5.2 Metabolic Pathways 104
- 5.3 Cell Cycle 126
- 5.4 Programmed Cell Death (Apoptosis) 135
- 5.5 Cell Differentiation 136
- 5.6 Cell Migration 139

**Unit III: Genetic Principles and Molecular Processes** **145-232**

**Chapter 6: Basic Principles of Inheritance** **147**

- 6.1 Introduction to Inheritance 147
- 6.2 Linkage and Crossing Over 153
- 6.3 Sex-linked Inheritance 156
- 6.4 Extrachromosomal Inheritance 157
- 6.5 Polyploidy 158
- 6.6 Reverse Genetics 159

**Chapter 7: Basic Processes** **164**

- 7.1 DNA as the Genetic Material 164
- 7.2 Prokaryotic and Eukaryotic Gene Organisation 169
- 7.3 DNA Replication 173
- 7.4 Gene Expression 182
- 7.5 Genetic Code 189
- 7.6 Translation 191
- 7.7 Gene Mutation 197
- 7.8 DNA Repair 202
- 7.9 Recombination 206
- 7.10 Regulation of Gene Expression 208

**Chapter 8: Genetic Disorder** **217**

- 8.1 Chromosomal Abnormalities and Syndromes 217
- 8.2 Monogenic Disorders and Pedigree Mapping 222
- 8.3 Polygenic Disorders 227

## **Unit IV: Quantitative Biology and Bioinformatics** **233-284**

### **Chapter 9: Introduction to Bioinformatics** **235**

|                                                                                                                   |     |
|-------------------------------------------------------------------------------------------------------------------|-----|
